IDEA #4

LAHU

"LAHU is making language learning fun by combining technology with physical games. LAHU helps teachers to become designers, to create their own gamified content and incorporate it into the curriculum. LAHU System is a combination of digital technology and tangible artifacts which can be used for teaching language through games. It consists of an interactive physical tool kit and a web-based platform. During the Entrepreneurial Weekend, we aim to start developing our digital solution - the platform for the teacher and focus on creating a user case experience for our users, the teachers, building wire-frames of the website, designing the user experience and transforming the user experience into a coding language."

Needed competences:
• teachers / teaching experience
• programmer / software developer / IT
• UX designer
• industrial designer
